

The Village of Teslin is currently in the process of finalizing the design for a new Marina. Our goal is for the Marina area to be more user friendly, durable, and better suit our growing community. The new design includes a larger boat dock to accommodate more boats, a breakwater to protect the dock area from waves, and a longer launchpad to allow access to the water during high and low water seasons. With the changing bridge location, we also have the option to create a recreation space at the Marina geared toward swimming, such as adding a floating dock (possible location represented by grey rectangle in picture below). Once the new bridge is completed, phase two of the development plans include adding an additional parking area. We are asking Teslin residents to fill out this survey to get feedback and an idea of what residents would like to see in the design.

1. Do you support the draft Marina design concept with the upgraded dock, launchpad, and breakwater?
 - Yes
 - No
2. Please explain your response to question 1.

3. Are there any recreation-oriented ideas that you would like to see included in the new Marina area?
 Yes
 No (skip to question 5)
4. If you answered “Yes” to question 3, please identify what recreation area ideas you would like to see included in the new Marina area.

5. Is there anything that you feel we have missed in the design that should be added to improve the Marina area?

6. Obtaining public input is important when finalizing Village of Teslin projects. Do you have any concerns with the current Marina area that you feel the Village should consider when finalizing the Marina design?

Please return the survey to the Village office or by email to admin.teslin@teslin.ca
